February 2022, Washington DC - Paradigm Investment Capital, LLC doing business as Logical Technology and Research (LTR), has been awarded GSA's 8(a) STARS III Government Wide Acquisition Contract (GWAC) by the General Services Administration (GSA). STARS III provides federal agencies with an efficient, streamlined procurement vehicle for awards to LTR. The contract base is 5 years, with a 3-year option period. It also features limited protestability for sole source awards up to \$10 million.

LTR President and CEO, Todd Rogers, noted that STARS III underscores the company's capabilities and experience providing IT mission support in the Federal sector. STARS III provides LTR federal customers with access to the full catalogue of LTR services, from state-of-the-art solutions in technology conversions and modernization, to cybersecurity, information assurance, acquisition, and other services. LTR has supported IT contracts at FEMA, DOD, and USDA, among others. The STARS III contract allows several task order types and provides procurement assistance through GSA. "I am especially pleased that STARS III gives Agencies a contract ceiling and timeline well-suited to the demands of IT infrastructure contracts, with a relatively quick turnaround for support and a \$50 billion ceiling. The dollar value and length of the contract enables LTR to work with Federal Agencies looking to achieve long-term IT goals," said Mr. Rogers.

GSA's fourth generation of the contract, STARS III, includes greater focus on emerging technologies, giving LTR the opportunity to expand capabilities through innovations and collaboration across sectors. The program also drives progress on important public policy objectives, including the [President's Executive Order 13985 On Advancing Racial Equity and Support for Underserved Communities Through the Federal Government](#) to improve diversity, equity, inclusion and accessibility in federal procurement.

For more information about accessing LTR through the GSA STARS III GWAC, email solutions@ltr.com

ABOUT LOGICAL TECHNOLOGY AND RESEARCH

Logical Technology and Research (LTR) is a Maryland corporation with its principal office in Washington, DC. LTR offers over a decade of broad industry and government experience, and a senior leadership team with subject matter expertise developing and supporting IT enterprise solutions in nearly every Federal government agency. LTR project teams work with clients to define business objectives, and then logically apply technologies and research to develop a fully integrated solution to achieve business goals. LTR is committed to combining excellence and experience to our clients, as well as engaging with the professional, civic, and business community.
